

BIRDWATCHING AROUND CAMBRIDGE

There has been a remarkable upsurge in interest and commitment to the role of nature conservation in urban areas. The residents of Cambridge are fortunate that large areas of bushland, coast and open parkland have been retained for passive recreation and a home for native plants and animals.

This brochure has been prepared to introduce you to these habitats and to provide some information about the native birds that have been recorded in Cambridge.

1. FLOREAT, CITY BEACHES

The Floreat, City Beach area is popular for swimming and recreation with facilities for visitors.

White-winged Fairy-wren
Malurus leucopterus

The dunes are also a good area for White-browed Scrub-wren and the less common Variegated Fairy-wren.

White-winged Fairy-wren are quite common and roam widely in groups of eight to twelve among the dune plants at Floreat Beach near Hale Road.

Caspian Tern
Sterna caspia

They breed on islands near Perth.

White-browed Scrub-wren
Sericornis frontalis

A beach search may yield sea and shore birds including Caspian and Crested Tern.

2. BOLD PARK

The entrance to the office of the Botanic Gardens and Parks Authority which controls and manages the park is from Oceanic Drive, just east of Reabold Hill.

Here also in Perry House are the headquarters of the Western Australian Group of Birds Australia and the Western Australian Wildflower Society. You are welcome to visit all three offices for information and maps of the park.

The most abundant birds in the park are the honeyeaters. In the western section, numbers increase when the red-flowering *Templetonia* (One-sided Bottlebrush) are in bloom.

Short-billed Black-Cockatoo
Calyptrorhynchus latirostris

Bold Park occupies an area of over 150 ha. There are several landforms, soil types and diverse vegetation and sixty-five species of bush birds have been recorded as residents, visitors or migrants.

White-checked Honeyeater
Phylidonyris nigra

The Banksia woodland is a good area for Grey Butcherbird and Red and Little Wattlebird.

Grey Butcherbird
Cracticus torquatus

BIRDWATCHING AROUND CAMBRIDGE

Great Crested Grebe
Podiceps cristatus

BOLD PARK (continued)

The Tuart Woodland provides nesting hollows for many birds including the Striated Pardalote. Listen for its loud call, 'chip-chip'. They feed among the higher branches.

Striated Pardalote
Pardalotus striatus

Some small insectivorous species such as the Grey Fantail and Western Gerygone move northwards through the metropolitan area in winter and are then abundant in Bold Park.

Grey Fantail
Rhipidura fuliginosa

Grey Fantails are more common from April to November. They are very inquisitive and will often come close to intruders.

In summer the migrant Rainbow Bee-eaters come down from the north. They breed in their underground tunnels.

Rainbow Bee-eater
Merops ornatus

3. LAKE MONGER

Along Lake Monger Drive there are shaded lawns with facilities for visitors.

Take a walk westwards along the lake and you will reach a small island in the lake which is a good place for watching the many different species of water birds.

4. PERRY LAKES

The lakes area is popular for passive recreation with picnic facilities and parking. The lakes and surrounding Flooded Gums provide an excellent habitat for water and bush birds.

Purple Swamphen
Porphyrio porphyrio

The open water provides good views of ducks, swans, grebes and coots.

The rushes around the eastern lake are home and breeding area for birds including Purple Swamphen and Dusky Moorhen.

Magpie-lark
Grallina cyanoleuca

As the lakes dry out, waders may be seen feeding along the edges of the lakes. They may include Black-winged Stilts, Black-fronted Dotterels and Common Greenshanks.

Common Greenshank
Tringa nebularia

Look among the Flooded Gum for Western Gerygone, Galah and Magpie-lark.

LAKE MONGER (continued)

Further north along the lake you will come to sedges and bulrushes which provide a habitat for such species as Little Grassbird and Clamorous Reed-Warbler.

Little Grassbird
Megalurus grammurus

Yellow-billed Spoonbill
Platalea flavipes

Look among the trees for bush birds. You should see a flock of Little Corella. These flocks began as cage escapees.

Lake Monger is a good spot to look for the Great Egret, Yellow-billed Spoonbill and Great Crested Grebe.

Little Corella
Cacatua sanguinea

Nankeen Kestrel
Falco cenchroides

Several raptors visit the area including the Australian Hobby, Brown Goshawk and Nankeen Kestrel. They are often seen hovering in their search for food.

BIRDS of the TOWN of CAMBRIDGE

Pacific Black Duck *Anas superciliosa*

QUAILS		
Stubble Quail	4	U
WATERFOWL		
Blue-billed Duck	4	C
Musk Duck	4	C
Freckled Duck	4	R

Australian Spotted Crake *Porzana fluminea*

BUTTON-QUAILS		
Painted Button-quail	2	M

This list has been prepared from the records of the Western Australian Group of Birds Australia. We would appreciate reports of sightings of rarer birds or any not recorded in this list.

WHAT IS BIRDS AUSTRALIA?

Birds Australia's national organisation for the study, preservation and enjoyment of Australian birds.

The WA Goup of Birds Australia has over 800 members statewide with a wide range of activities and services for members.

Programs include excursions, camp-outs, bird surveys and social activities.

We have a library, books for sale and information about birds.
